ADDITIC dogwood liv	DNAL COMMENTS: Planted hardwood vegetation noted onsite includes: black willow and ve stakes. Other vegetation noted onsite includes: goldenrod, sedge, <i>Scripus</i> sp., sycamore, tulip processing the stakes of the sycamore o
ADDITIC dogwood liv woolgrass,	NAL COMMENTS: Planted hardwood vegetation noted onsite includes: black willow and

If required to complete Level 1 and Level 2 monitoring <u>only</u> stop here; otherwise, complete section 3.

Section 3. CHANNEL STABILITY

Visual Inspection: The entire stream project as well as each in-stream structure and bank stabilization/revetment structure must be evaluated and problems addressed.

Report on the visual inspection of channel stability. <u>Physical measurements of channel stability/morphology will not be required.</u> Include a discussion of any deviations from as-built and an evaluation of the significance of these deviations and whether they are indicative of a stabilizing or destabilizing situation.

The channel is stabile throughout the entire onsite stream relocation for the Year 5 Winter evaluation. A bankfull event has occurred recently onsite. NCDOT will continue to monitor this stream relocation.

Date	Station	Station	Station	Station	Station
Inspected	Number	Number	Number	Number	Number
Structure					
Type					
Is water					
piping					
through or					
around					
structure?					
Head cut or					
down cut					
present?					
Bank or scour					
erosion					
present?					

NOTE: Attach separate narrative sheets to each monitoring report describing/discussing the overall monitoring results. Include the identification of specific problem areas/channel failures, estimated cause and proposed/required remedial action. This should include a brief discussion of any parameter that has changed significantly from as-built.
